## Platinum Medical Imaging Announces Installation of a GE 1.5T 16 CH 15x Excite HDxT MRI in Outpatient Imaging Center

**Deerfield Beach, FL, June 27, 2011-** Platinum Medical Imaging, a leading provider of aftermarket [GE] CT & MRI equipment, parts and services announced today the complete installation of a refurbished GE 1.5T 16 Channel - 15x Excite HDxT MRI at Stockton MRI & Molecular Imaging Medical Center in Northern California. Equipped with high definition applications and advanced imaging software, the highly versatile system allows technologists to easily capture a full range of anatomical images that were previously difficult to acquire using a mobile MRI unit. This installation represents the company's continuous mission to help facilities increase savings and patient care with high quality imaging systems that precisely fit clinical needs.

The replacement of the mobile MRI unit with the new system enables technologists to comfortably position patients in order to capture clear images for accurate diagnosis - making routine examinations quick and easy without compromising patient care. "The installation of this advanced MRI system is very significant as it demonstrates our ability to continuously deliver high quality aftermarket medical imaging solutions," said Jeff Fall, President at Platinum Medical Imaging. "Every day, we strive to support our customers' goals by adhering to our strict quality processes that have been certified to meet ISO 9001 and 13485 standards."

The benefits from replacing the previous system with the latest scanner that features advanced capabilities has produced measureable results throughout the center's MRI operations, such as quickly capturing images of all areas of the body and improving the delivery of patient care.

"The experience of working with Platinum Medical Imaging was extremely rewarding, the scanner was successfully delivered without compromising any functionality or quality of the system," said Stan Dobretz, Administrator & Chief Technologist at Stockton MRI & Molecular Imaging Medical Center. "We are completely satisfied with the overall experience and results of the installation, such as the greatly improved patient care and efficiency of the imaging center."

Stockton MRI & Molecular Imaging Medical Center is a free-standing outpatient medical imaging facility that provides a full range of radiology services. Established in 1991, the medical imaging center is known as a community leader in the Northern California and surrounding central valley area.
